

A DMS designed to improve your Fixed Operations department.

DOMINION VUE™

Dominion VUE™ is the only DMS that allows the full repair order write up, walk around, and close out to be done on a Surface or iPad Pro. Service techs and advisors will have easy access to all the data tools they need to streamline processes and increase revenue.

Multi-Point Inspection

Dominion VUE utilizes an electronic Multi-Point Inspection that can be performed on a Surface or iPad Pro. Service techs can use tablets to take photos and videos, request parts, clock on and off jobs, and communicate with advisors without leaving the bay.

Service Price Guides

Generate more revenue by creating accurate estimates for your technicians' labor. Dominion VUE provides some of the most sophisticated service price guides that will close the widely ignored profit leak caused by misestimating labor time for service.

Service Appointment Scheduling

Dominion VUE allows customers to easily schedule appointments - online, through a mobile device, at the dealership or through a call center.

Text and Email Status Updates

Dominion VUE provides an automatic messaging service to keep your dealership's customers updated via text or email. These updates reduce concerns, keep service customers informed, and increase accuracy about wait time.

Benefits

- Tools are built into the core of Dominion VUE, eliminating the need to jump in and out of 3rd-party software
- Service technicians and advisors have access to all the data and tools they need to increase profitability and CSI
- Increase user efficiency with our intuitive, mobile software allowing for high performance at their desks or on the go
- Create lasting customer experiences with the suite of customer communication and tracking tools
